Data analyst and dashboard developer with seven years of experience building end to end analytics workflows, interactive applications, and statistical models on large-scale structured datasets. Skilled in R, Python, and SQL, with a strong background in data visualisation and stakeholder-facing communication. Seeking Senior Data Analyst, Analytics engineer and BI Developer roles in the private sector.

EXPERIENCE

Senior Data Analyst

Oct 2022 - Present

UK Government, London

- Led analytical projects on datasets of millions of rows, delivering findings to senior colleagues through interactive dashboards, written briefings, and presentations.
- Built and deployed live R Shiny applications with automatic data processing, interactive maps, and real-time filtering, used regularly by 50+ stakeholders across the organisation.
- Built statistical and machine learning models in Python and R to identify what factors drive outcomes across large, structured datasets covering hundreds of product and country combinations.
- Managed and mentored a team of analysts, providing hands-on technical support across R, Python, and SQL workflows.
- Designed Power BI and Tableau dashboards that translated complex model outputs into clear visuals for non-technical colleagues and senior decision-makers.

Data Analyst

Sept 2019 – Aug 2022

UK Government, London

- Built regression models in R and Python on large, structured datasets covering hundreds of product and country combinations to identify key patterns and relationships.
- Cleaned, combined, and structured complex datasets from multiple sources using R and SQL, working at a granular product and country level across very large volumes of data.
- Produced analytical briefings that translated model outputs into clear, practical recommendations for senior colleagues.

CRM and Data Analyst

Jun 2018 – Sept 2019

Wowcher, London

- Built customer segmentation and predictive models in Python and SQL to improve the targeting of commercial marketing campaigns
- Analysed customer behaviour data to improve campaign conversion rates, using A/B testing to validate what worked
- Supported large-scale data migration and personalisation projects across commercial customer datasets

PROJECTS

PUR App: Trade Analytics Dashboard

- Live R Shiny application processing millions of rows of structured data, used by 50+ stakeholders. Combines automatic data processing with interactive maps built with Leaflet and sf, time-series charts and treemap visualisations in ggplot2 and Plotly, and one-click formatted Excel report downloads via openxlsx

TRoOGiverse: Rules of Origin Analytics Tool

- Interactive Shiny application making thousands of complex trade rules searchable and easy to navigate for non-analysts and colleagues across the organisation. Built collaboratively with a team of analysts, combining individual scripts into a single central application

Econometric Modelling: Agricultural Import Drivers

- Python-based research project using statistical modelling on 512 observations of UK import data to identify what drives firms to claim preferential tariffs under the UK-EU Trade and Cooperation Agreement. Eight model specifications compared and written up as a formal research paper, published September 2025

TECHNICAL SKILLS

Languages: R (expert), SQL (advanced), Python (intermediate), HTML and CSS (basic)

Dashboards and Visualisation: R Shiny, ggplot2, Plotly, Leaflet, sf, treemapify, DT, shinyjs, openxlsx, Power BI, Tableau, Matplotlib, Seaborn

Data Processing: dplyr, data.table, tidyverse, pandas, NumPy, lubridate, SQL-based workflows

Modelling and Statistics: Regression, Tobit, fractional logit, time-series, hypothesis testing, A/B testing, classification, clustering

Tools: Git, GitHub, Jupyter Notebooks, Excel (advanced), LaTeX

EDUCATION AND CERTIFICATIONS

MSc Economics (Distinction)

2021 – 2023

Queen Mary University of London

- Specialisation in econometrics and quantitative data analysis

BSc Economics with Econometrics (2:1)

2014 – 2017

University of Kent

IBM Data Science Professional Certificate

2025

- Machine learning, Python, SQL, data visualisation, and applied data science methods
